PROTECTION WHEREVER YOU ARE

Compression

Uldura's Compression Socks balance premium technology with logical functionality to create innovative footwear perfect for business people, air travel, sports professionals and more...

WHAT IS A COMPRESSION SOCK?

New for 2014 is Uldura's line of Fashion Compression Socks. Our goal is to build on our protective roots and apply them to the everyday user. In order to accomplish this we have taken ordinary business socks and added stylish design, medical grade graduated compression, copper ion technology and used only the highest quality environmentally sustainable yarns.

- *Modern stylish design*
- *Earth friendly bamboo and merino wool*
- *Available in 10-15 mmHg*
- *Natural copper ion bacterial and fungal control*

Uldura's Fashion Compression Socks using graduated compression to promote better circulation and help prevent chronic venous disorder. More generally, these socks can be worn every day to prevent muscle fatigue, keeping your legs feeling fresh during long working days.. Furthermore, the addition of Copper CuTEC™ uses ancient technology to prevent odour causing bacteria, fungal infections and promote healthy skin cell growth.

RECOMMENDED USES

Medical Professionals / Factory Workers /
Business People / Teachers / Air Travel / Diabetics /
Chronic Venous Disorders / Leg Fatigue / Bank Tellers /
Retail Tellers / Desk Workers / Sports Professionals

HOW IT WORKS

Uldura's Compression Socks are designed to aid circulation. Blood is pumped from the heart throughout the body and in the case of the lower legs, the heart must fight against gravity as it flows back toward the core. Compression socks help to mimic the natural contraction and relaxation of the calf muscles. It's this process that helps push blood back up to the heart again.

COPPER CUTEC™

Copper CuTEC™ is a unique and proprietary copper fiber technology that utilizes the qualities of copper to inhibit bacterial and fungal growth. This technology provides natural anti-odour and hygienic protection, plus the copper ion technology helps restore skin cells for healthier looking skin texture, tone and wellness.

MERINO WOOL IS A RENEWABLE AND SUSTAINABLE RESOURCE

Unlike the synthetic by products of the petroleum industry or the cotton industry which requires vast quantities of water and pesticides. Merino wool is a true renewable resource and is produced with minimal environmental impact. Merino wool is the finest natural fibre available and is biodegradable.

BAMBOO YARNS ARE A RENEWABLE AND SUSTAINABLE RESOURCE

The bamboo plant is the fastest growing woody plant on the planet. Some species grow as much as 1 meter/day and can reach heights of 60 meters. Most varieties can be harvested within 3-5 years versus a 10-20 year growing cycle for soft woods. This incredibly growth rate makes bamboo yarn the most sustainable based cellulose fiber yarn available today.
