PROTECTION WHEREVER YOU ARE

Flame Resistant

Uldura's Flame Resistant Socks balance premium technology with logical functionality to create innovative footwear perfect for motor sports, industrial safety, military applications and more...

ABOUT ULDURA FLAME RESISTANT SOCKS

The ultimate goal in designing the Uldura Flame Resistant Socks was to protect the skin from burns. After all, the skin is the body's largest and most sensitive organ. Secondly, these socks must provide utmost comfort to be worn in the most demanding conditions. In order to accomplish these goals, a blend of Lenzing FR® and Merino wool is the premier choice.

Lenzing FR® is a fiber made of natural raw material that has a flame retardant substance incorporated throughout its cross-section. Beyond it being environmentally friendly, its composition also ensures permanent protection that cannot be compromised by either washing or abrasion.

- *Permanent flame resistance*
- *Outstanding comfort*
- *Environmentally friendly*
- *Natural temperature control*

Our flame resistant technology can be used on its own or combined with a number of our other technologies. Please see below for more details on Uldura Flame Resistant Socks' adaptability.

RECOMMENDED USES

Urban and Forest Firefighting / Motorsports /
Electrical Workers / Oil and Gas Industry / Welders /
Steel Workers / Disaster Relief / Military

HOW IT WORKS

Uldura's Fire Resistant Socks utilizes a blend of Lenzing FR® with natural merino wool resulting in fire protection from foot to knee with uncompromised comfort.

LENZING FR®

Lenzing FR® protects against heat stress. Produced from wood, a natural raw material, Lenzing FR® offers protection against heat and flame in a variety of different applications. Around the world Lenzing FR® sets the standard for quality among cellulose fibers with an incorporated FR agent. Only Lenzing FR® is produced using the Lenzing Modal® process. This ensures that the very highest fiber tenacities are obtained and makes it possible to insert the FR agent in a permanent manner.

COPPER CUTEC™

Copper CuTEC™ is a unique and proprietary copper fiber technology that utilizes the qualities of copper to inhibit bacterial and fungal growth. This technology provides natural anti-odour and hygienic protection, plus the copper ion technology helps restore skin cells for healthier looking skin texture, tone and wellness.

ULDURA'S ADAPTABILITY

Not only do we have a wide range of products, we are also very versatile. We have the ability to mix and match any or all of these technologies to create a finished product that can satisfy the most specific needs. Please view the chart to learn more about the combinations available and see how Uldura Socks can work for you.
