PROTECTION WHEREVER YOU ARE

Gaiter

Uldura's Gaiter Socks balance premium technology with logical functionality to create innovative footwear perfect for outdoor sports, industrial safety, military applications and more...

WHAT IS A GAITER SOCK

Gaiter Socks are designed to be worn like an ordinary boot sock but with a very unique added benefit. Traditionally, gaiters are an individual piece of apparel worn as an accessory to cover the gap between the top of a boot and the bottom of your pants. Gaiters are intended to keep various types of debris from getting into your boots, pants and socks.

The Uldura Gaiter Sock has several key advantages over a traditional gaiter;

- *The anti debris slip cover and sock are one piece eliminating cost of purchasing gaiters separately.*
- *The anti debris slip cover is very elastic and fits snugly a full 360°*
- *Snug fit keeps out all sizes of uninvited guests, be it insects, sand, sawdust etc.*
- *Snug fit secures boot laces from falling loose and becoming a hazard*

Our Gaiter Sock technology can be used on its own or combined with any, or all of our waterproof, cut resistant and flame resistant technologies. Please see below for more details on Uldura Gaiter Socks' adaptability.

RECOMMENDED USES

Construction / Camping / Mining /
Emergency Response / Hunting / Forestry /
Waste Management / Landscaping / Fishing /
Factory Work / Mountain Biking / Disaster Relief /
Tree Planting / Cross Country Skiing / Military

HOW IT WORKS

The Uldura Gaiter Socks technology was developed by creating a traditional boot sock and adding an additional calf tube, effectively creating our unique anti debris slip cover. This slip cover can be worn in tandem with the inner tube creating the look and feel of a traditional boot sock but when protection is needed, simply fold the outer tube over the top of the boot creating a seal, preventing unwanted debris from entering the boot.

COPPER CUTEC™

Copper CuTEC™ is a unique and proprietary copper fiber technology that utilizes the qualities of copper to inhibit bacterial and fungal growth. This technology provides natural anti-odour and hygienic protection, additionally the copper ion technology helps restore skin cells for healthier looking skin texture, tone and wellness.

ULDURA'S ADAPTABILITY

Not only do we have a wide range of products, we are also very versatile. We have the ability to mix and match any or all of these technologies to create a finished product that can satisfy the most specific needs. Please view the chart to learn more about the combinations available and see how Uldura Socks can work for you.
