PROTECTION WHEREVER YOU ARE

## Waterproof

**Uldura's OutDry Waterproof Socks balance premium technology with logical functionality to create innovative footwear perfect for outdoor sports, industrial safety, military applications and more...**

### **WHAT IS A WATERPROOF SOCK?**

Uldura's OutDry Waterproof Socks are exactly that, 100% waterproof. Uldura has partnered with OutDry Technologies to create the world's first waterproof sock with the OutDry patented membrane technology. Our goal was to design a product that would keep your feet completely dry regardless of your footwear. Furthermore, the OutDry membrane is extremely breathable allowing moisture vapour to escape while keeping liquid water out. The membrane itself is just microns thick and can 4- way stretch up to 200 % of its original size allowing the sock to feel and perform like any traditional sock. Uldura's OutDry Socks provide the following benefits;

- *Extreme Waterproofness*
- *Superior Breathability*
- *Totally Windproof*
- *Constant Insulation*
- *Perfect Fit*

We also offer bamboo or merino wool depending on warm or cold weather environments respectively. The end result is a waterproof, antimicrobial sock that will keep you warm in winters or cool in summers. Truly the first of its kind.

Our waterproof sock technology can be used on its own or combined with a number of our other technologies. Please see the chart for more details on Uldura's Outdry Waterproof Socks' adaptability.

### **RECOMMENDED USES**

Hunting / Fishing / Military / Camping / Hiking /  
Disaster Relief / Tree Planting / Forestry /  
Mountain Biking / Golf

### EXTREME WATERPROOFNESS

Inside Uldura's OutDry socks, the waterproof and breathable membrane is bonded directly to the external sock shell, creating a unique body. Thus, with OutDry, there are no gaps between the shell and the waterproof barrier where the water can stagnate and create an unpleasant wet, cold sensation.

### SUPERIOR BREATHABILITY

The combination of Uldura proprietary yarns and the OutDry membrane are specifically engineered for foot protection and comfort during sport activity. Thanks to the direct lamination process the absence of humidity between the membrane and the out layer greatly facilitates moisture management.

### CONSTANT INSULATION

The secret behind Uldura's comfort lies with the large volume of warm, dry air which envelops your feet. This layer of air dramatically reduces the risk of condensation from excessive perspiration, and maintains stable foot temperature.

### COPPER CUTEC™

Copper CuTEC™ is a unique and proprietary copper fiber technology that utilizes the qualities of copper to inhibit bacterial and fungal growth.

### ULDURA'S ADAPTABILITY

Not only do we have a wide range of products, we are also very versatile. We have the ability to mix and match any or all of these technologies to create a finished product that can satisfy the most specific needs. Please view the chart to learn more about the combinations available and see how Uldura Socks can work for you.

### WANT TO KNOW MORE?

For further information please call or email us at either of our offices below. Alternatively, more information including instructional videos and downloadable product information sheets are available at [www.uldura.com](http://www.uldura.com).
